## **Notice**

ETT has recently received several requests for information regarding concurrent outages on the ETT-owned CREZ lines from February 11 to February 24, 2021. As committed to previously, ETT intends to take no more than one double circuit line out of service for arm inspection and replacement activities. However, ongoing necessary work at ETT-owned CREZ stations requires temporary outages on additional CREZ lines that exit the associated stations. Outages have recently been added to the ERCOT MIS outage scheduler through April 2021 that include all necessary equipment maintenance, station upgrades and generation interconnection activities. This is considered station critical work and has been planned to provide the minimal impact to our customers. Outages will continue to be updated through the end of the third quarter of 2021 and are planned to be updated in the ERCOT MIS outage schedule by the end of February 2021.

Please see Outage Scheduler for more details. Any additional questions should be addressed to Mr. Blake Gross at [bagross@aep.com](mailto:bagross@aep.com).
